

Huntswood + Traced Control

HUNTSWOOD

SECTOR:

Corporate Governance
& Compliance

MOBILITY SETUP:

COPE

DEVICES:

iOS

KEY RESULTS:

A comprehensive mobile security solution that protects hybrid workers from compromised WiFi and mobile phishing.

MOBILE PROTECTION FOR HYBRID WORKING

Huntswood has been providing blended resourcing, outsourcing and advisory solutions across regulated markets for 25 years. Like many organisations, Huntswood has become heavily reliant

on mobile devices. It needed to ensure that when staff were out and about, they were not connecting to compromised WiFi networks and were protected against attacks that put business data at risk.

"As Technology Director I have to ensure that the the company is protected, no matter what devices my colleagues are using."

KIRK CROAL, Technology Director

The technology team was keen for employees to be informed if they encountered threats to their mobile devices, such as compromised WiFi networks. It was important that administrators could see whether mobile users had been alerted to the threats they encountered and remediated them.

A PERFECT FIT

Impressed by Traced's customer focus, and passion for creating a simple-to-use security product that makes a real difference, Huntswood determined Traced to be a perfect fit, in terms of culture, price and product.

"We looked across the market and found very generic offerings, with limited functionality, but with Traced I found the missing piece of the jigsaw for our mobile devices."

KIRK CROAL, Technology Director

PAVING THE WAY FOR BYOD

Huntswood rolled out Traced to all company-owned mobile devices. Traced's privacy-first ethos ensures seamless, full adoption, and paves the way to implementing a secure, sustainable BYOD mobility strategy in the near future.
